

## **Tailwind Wheels Out Innovative New Version Of Software For The Trucking Industry**

Vancouver, Canada (June 16, 2009) -- Tailwind Management Systems released Version 5.4 Service Pack 1 of its powerful CMS transportation management software.

"The things you look for in a truck are the same things you want in trucking software - Value, Dependability, and Performance", says Matt Chambers, Operations Manager at Tailwind Management Systems, Inc.

Tailwind is a leading provider of trucking software solutions for carriers and brokers. Cost-focused companies will like its time-saving features.

"We can quickly and accurately track our customer's loads and update them at a moment's notice on their shipment status," said Jamie Plowman of Polar Express. "CMS has saved us time and money."

CMS 5.4 Service Pack 1 was developed largely based on customer feedback, and includes new features as well as numerous enhancements. At a glance:

- \* 85% time reduction in the implementation process
- \* The most stable version ever due to new, rigorous QA procedures
- \* Greatly improved usability

"The huge reduction in implementation time is critical, as it allows our 1-3 broker clients to essentially implement the software themselves," says Chambers. "This will save our customers a huge amount of time, letting them focus on quickly maximizing productivity in their day to day operations."
